## I. Hardware

Titles:	MM3D growing house controlling and monitoring unit	Rev.:	190203	Pages:	3/29
	Technical manual				
Name	Pozsár Zsolt			Date:	2022-03-13

The device is capable of measuring, controlling and monitoring the characteristics of a growing site.

## 1. Technical data

Supply voltage: 5V DC (powered by 230 V AC/5 V DC adapter)

Supply current: max. 2.5 A

Isolation class: Class II.

Mechanical size:  $190 \times 140 \times 70 \text{ mm}$ 

IP protection: IP 54
IK protection: IK 03

Material of cover: termoplaszt (ABS)

LAN: Ethernet (RJ45)

#### Measured data:

value	range	resolution	accuration	note
temperature	-40+80 °C	0.1 °C	< ±0.5 °C	Length of sensor cable: max. 20 m
humidity	0-100% RH	0.1 % RH	±2 % RH	

## Programmable in- and outputs:

sign	type	note
IN #1	input	
IN #2	input	TTI level impute a sith mull up assisted their setting state in I."
IN #3	input	TTL level inputs with pull-up resistor, theirs active state is "L".
IN #4	input	
OUT #1	output	NO/NC relay contact outputs.
OUT #2	output	Load capacity: 250V 10A AC or 30V 10A DC.
OUT #3	output	The operation of the relays can be switched off with a key switch, this status
OUT #4	output	is indicated by a red LED.

#### Programmable error lights:

sign	note
ERR #1	
ERR #2	Ded I EDs on front panel
ERR #3	Red LEDs on front panel.
ERR #4

#### 2. Administration

Setting: via SSH

Access data: with web browser (via HTTP)

## 3. Description

The device is based on a Raspberry Pi 3 B + microcomputer with Raspbian operating system, which also includes software for operating the unit. No graphics system installed on it.

The device's four TTL-level inputs are equipped with pull-up resistors and have an active level of L. They can be used, for example, to check the position of air vents, doors and windows, check the functioning of the ventilation system (airflow sensor), the water pressure sensor, or the status of the motor or overcurrent protection devices with auxiliary contact.

The device has four relay contact outputs that are capable of switching to relatively high power (2.3 kW at 230V AC). The operation of the relays can be disabled by means of a front key switch; In all cases, external circuits must be provided with overcurrent protection.

There is no need to connect a keyboard or monitor to set up and operate the MM3D, and access to it is always done through SSH. Current status and measured data can be checked using a web browser.

## 4. Schematic and printed circuit draws

The wiring diagram of the device is shown in Annex 1, PCB draws are in Annex 3-7. You can download it as part of the complete documentation or in separate PS, PDF, SVG and KiCAD formats from the developer / manufacturer's website.

#### 5. Terms of use

Hardware documentation can be modified and/or redistributed under the Creativ Commons 4.0 Attribution Non-Commercial (CC-BY-NC-4.0) License. You can read the full (English) text of the license online. (Refer to Chapter IV for references.)

## b) Connector pinout

#### Input terminal (J1):

- 1: IN GND
- 2: IN #1
- 3: IN #2
- 4: IN #3
- 5: IN #4
- 6: -
- 7: -
- 8: S1 GND (external sensor GND)
- 9: S1 data (external sensor data)
- 10: S1 +5V (external sensor +5V)
- 11: +5 V in (power voltage input)
- 12: GND in (power voltage input)

## Output terminal (J3):

- 1: NC1
- 2: COM1
- 3: NO1
- 4: NC2
- 5: COM2
- 6: NO2
- 7: NC3
- 8: COM3
- 9: NO3
- 10: NC4
- 11: COM4
- 12: NO4

Numbering on both connectors (terminal blocks) is in the installed position of device from top to bottom.

#### 1. General description

Operation of the device is provided by Python (control), Perl (data access) and Bash (utilities) scripts.

#### 2. Prepare

Before installing the program, you must install Raspbian OS Lite on Raspberry Pi. Remember to change the default password for the user 'pi', configure the hostname and access to the local network. For easier remote access, use a permanent IP address or configure the IP address assignment on your router.

Prepare operation system:

```
pi@raspberry$ sudo apt-get update
pi@raspberry$ sudo apt-get upgrade
pi@raspberry$ sudo apt-get install git wget
pi@raspberry$ sudo echo "deb http://www.szerafingomba.hu/deb/ ./" >> /etc/apt/sources.list
pi@raspberry$ sudo wget -q -O - http://www.szerafingomba.hu/deb/KEY.gpg | apt-key add -
pi@raspberry$ sudo apt-get update
pi@raspberry$ mkdir $HOME/download
```

#### 3. Download

Download from homepage:

```
pi@raspberry$ cd $HOME/download
pi@raspberry$ wget http://www.szerafingomba.hu/softwares/mm3d/mm3d-sw-0.8-armhf.tar.gz
pi@raspberry$ tar -xzf mm3d-sw-0.8-armhf.tar.gz
```

Download new release from Github:

```
pi@raspberry$ cd $HOME/download
pi@raspberry$ git clone https://github.com/pozsarzs/mm3d-sw.git
```

#### 4. Installation

```
pi@raspberry$ cd mm3d-sw
pi@raspberry$ ./prepare
pi@raspberry$ ./install
```

Install program from internet with package manager:

```
pi@raspberry$ sudo apt-get install mm3d-prepare
pi@raspberry$ mm3d-prepare
pi@raspberry$ sudo apt-get install mm3d-sw mm3d-web mm3d-eec
```

It that is installed with the package manager is placed in the /usr directory instead of /usr/local.

## 3. Settings

Edit main settings:

```
mm3d@raspberry$ mm3d-editmainconf
```

The shellscript stops the service and opens the mm3d.ini file in the default editor. After saving the file, it refreshes the homepage and launches daemont. Content of configuration file:

```

The shell program starts the setup program and then resumes the service after saving and exiting.

## 6. Using the device

The device works automatically after installation and does not require human intervention. Checking and configuring your operation is only possible remotely via a network.

The device can be configured via SSH, the environmental characteristics can be set via SSH or with XMMEEC program. In the second case, a key-based login is required.

The set environment characteristic, the current status and the measured data can be checked with a web browser or MM3DRead program. Many data can be queried over HTTP without a browser. See *getdata.cgi.7.qz* manual page for details.

#### 7. Terms of use

# **III. Example of application**

Titles:	MM3D growing house controlling and monitoring unit	Rev.:	190203	Pages:	17/29
	Technical manual				
Name:	Pozsár Zsolt			Date:	2022-03-13

The example illustrates the co-operation of the analog controllers MM1A and MM2A. The operation of the growing house requires controlled lighting and ventilation, heating and humidification. The wiring of the house is in annex 2.

## Input and output function:

sign	function	note						
		Inputs						
IN #1	-							
IN #2	water pressure sensor	low pressure: opened contacts						
IN #3	operation mode switch	growing mushroom: opened contacts						
IN #4	-							
	Outputs							
OUT #1	Humidifying	magnetic valve with 24V AC solenoid						
OUT #2	Lighting	fluorescent lamps						
OUT #3	Ventilation							
OUT #4	Heating	electrical heaters						
		Error lights						
ERR #1	Humidity	Bad humidity.						
ERR #2	Low water pressure	Pressure of the incoming water is low for the operation of the humidifier system.						
ERR #3	Wrong values-	Wrong measured values.						
ERR #4	Temperature	Bad temperature.
